

I.1
11/15/96

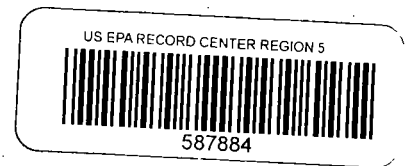

**UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION 5**

DATE: November 15, 1996

SUBJECT: Daelyte Service Company, Detroit, Michigan

FROM: P.C. Lall, On-Scene Coordinator *P.C. Lall*
Emergency Response Branch - Section 1

TO: Daelyte Services Site File

This site was referred to the Superfund Division by the Waste, Pesticides, and Toxics Division through a letter dated July 8, 1996. The site was assigned to me on July 19, 1996. File material was reviewed as received from the Division. Attempts were made to gain access to site for site assessment. Site attorney (D. Attermeyer) indicated problems with access. I inspected the site from outside on August 5, 1996. No evidence of hazardous materials, wastes or chemicals was found. The property is completely fenced in and gates are locked. Based upon the file information and the inspection of the exterior of the facility, the Daelyte Services site does not meet the removal criteria.

These findings were relayed to the Section Chief on or around August 7, 1996, and to the site attorney. The attorney stated that she was still trying to gain access to the site for an inspection/evaluation of the interior and stated that she has a civil investigator assigned to the site.

During the period since August 7, 1996, several conversations have been held, but the access arrangements have not been made.

Pending access, it is the recommendation of this OSC that the file be considered closed. If, in the future, access is arranged, a complete site assessment will be conducted. Even though the file information provided to ERB, conversations with the MDEQ inspector and the exterior inspection of August 5, 1996, indicate no removal threat is present at the site, when access is available, an assessment of the interior of the building would be conducted by this OSC to confirm the presence or absence of any alleged hazardous materials/waste.
